

Dr. Jecko Thachil

I am a Consultant in Haemostasis and Thrombosis at the Manchester Royal Infirmary and Honorary Senior Lecturer in Liverpool School of Tropical Medicine.

My bleeding disorders work is based in one of the biggest haemophilia centres in the UK. My research work focused on the role of platelets interaction with white cells in inflammation and sepsis and currently in new therapies in haemophilia, anticoagulation in kidney disease and expanding the speciality in low and middle income countries.

Internationally, I served as the chairman of the DIC subcommittee of the International Society of Thrombosis and Haemostasis and was recently identified in this area to be among the top three health care professionals in the world (expertscape).

I have published over 300 peer-reviewed papers, and edited the popular books; Haematology in Critical Care and Handbook of Venous Thromboembolism.
